

v1.1 2022-12-11

Compiled by WANG Chenwei
wangchenwei@hotmail.com

- This chart notates middle C as C4, one octave higher as C5 etc.
- 8va = octave higher, 8vb = octave lower, 15ma = 2 octaves higher.
- Please use the treble clef for Zhonghu part scores.
- Please use the 8vb treble clef for Zhongyin-Sheng, Zhongyin-Guan and Zhongguan part scores.
- "Optional" means that in the CO repertoire, this instrument is only used in pieces which need it. If deemed unsuitable for the composers' intentions, it can be omitted.

- Composers can allocate the 6 Di players in other ways, e.g. 2 Bangdi, 4 Qudi or 3 Bangdi, 3 Qudi etc., especially if the piece does not need the low register of the Dadi.
- If there is a need to switch Di during the piece, composers can also indicate the parts as Di 1, Di 2 etc. and specify when to use which type of Di.
- If the key of Di is left to the players' discretion, specify at least whether the pitch should sound as notated or 8va.
- Composers can request for a membraneless sound (without *dimo*).
- Early scores included the "Xindi", a membraneless chromatic flute that has been unused for decades. Its parts are now played on a membraneless Dadi.
- While the Dadi and Qudi can play another 3 semitones above the stated range, they can only be played forcefully and the timbre is poor.
- For each key of Di, the semitone above the lowest pitch (e.g. E=4 on the Dadi in G) sounds very muffled due to the half-hole fingering and is unsuitable for loud playing.
- All instruments do not use transposed notation other than transpositions at the octave.

- All 5 Sheng players can double on the Traditional Sheng. Their pitches and fingering charts are available upon request.

- The Guan player can play any type of Guan except the Beidiyin-Guan.
- As the Beidiyin-Guan is played by the Cizhongyin-Suona player, these two instruments cannot be used simultaneously.
- Please enquire in advance if Suona players are required to double on the Guan.

tonic

7 Percussionists

- The percussion staves can be placed above or below the plucked strings.
- If each player plays more than one instrument, please indicate the allocation (e.g. Datangu + Xiaoluo), or write one staff for each player (e.g. Perc. 1, Perc. 2) and indicate the instruments used.

Timpani (standard set of 4)

5th small timpani available too

Vibraphone

Tubular bells

Marimba

Xylophone

sounds 8va

Glockenspiel

sounds 15ma

Yunluo

sounds 8va

Although the timpani can be tuned around a semitone higher or lower than stated, a too taut or too loose drumhead results in a poor timbre.

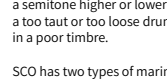

SCO has two types of marimba:

- 4½-octave with lowest pitch A2
- 5-octave with lowest pitch C2

SCO has two types of Xylophone:

- 3½-octave with lowest pitch F4 (written F3)
- 4-octave with lowest pitch C3 (written C3)

Bell plates (2 pieces)

Paigu (set of 5 tunable toms)
(tuned to specific pitches) (Tuned to relative pitches)

Sounds 8vb

The Paigu can be either tuned to specific or relative pitches. Tuning each drum to either end of its range (e.g. E or B for the highest drum) results in a poorer tone quality.

	Drum family	Gong family	Cymbal family	Other Chinese perc.
Drum family	- Xiaotanggu	- Xiaoluo	- Xiaocha	- Paiban
Cymbals	- Biangu	- Daluo	- Shuicha	- Zhuban + Jieban
	- Huapengu	- Zhangluo / Jiaoluo	- Naobo	- Bangzi
	- Datanggu	- Tam-tam / Chaoluo	- Chuanbo	- Nanbangzi
	- Jiangu	- Mangluo (various)	- Guangbo / Dabo	- Muyu
	- Xinjiang Shougu	- Fengluo	- Pengling	- Tongqing
